

Multifunction Combo Heat Press Machine technical innovation

We insist highly observation,diligent in thinking,good at summing up experience,

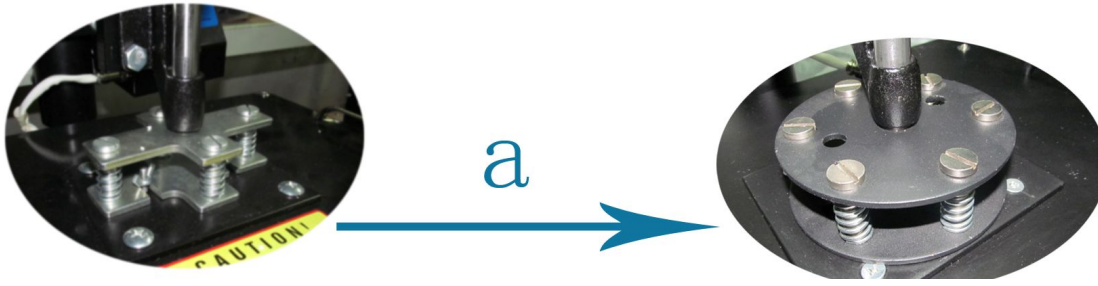

active in innovation.According to numbers of measurements and client survey,our professional development personnel ,management group and much skilled technicians developed the new Multifunction Combo Heat Press Machine with all of the traditional function

The machine combos four functions: plate press(12.5cm&15.5cm), mug press { 5.5&6.3cm&7.5cm(round mug);120z(cone mug) } , hat press (8*15cm)and T-shirt heat press (29*38cm).

The machine could add many size heat press parts.it can go up and down, go round 180 degree to lay down the things that you want to heat transfer print on.Much more humanism design, easy to change the mould.

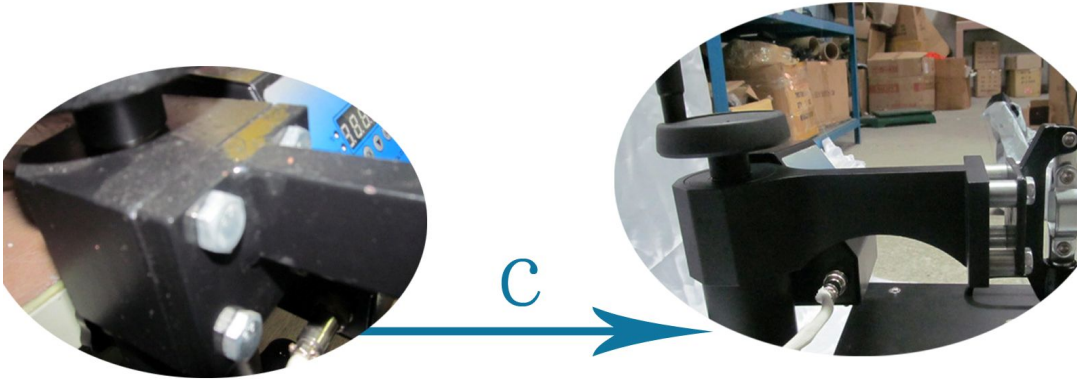

Points of innovation:

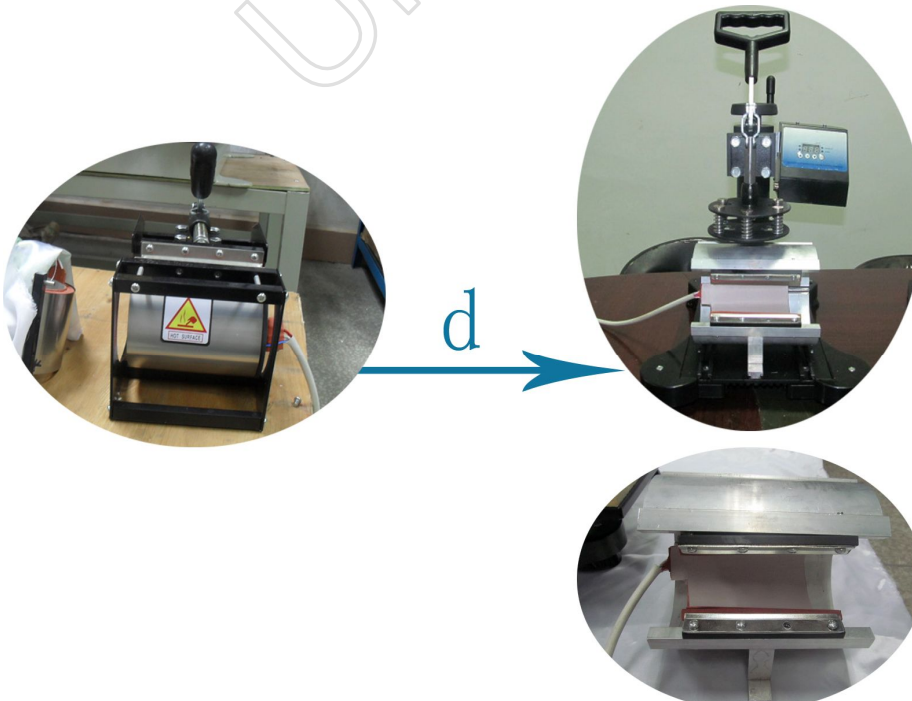

a. Enlarge the range of machine's pressure. There are 6 springs instead of 4 springs. So the new machine get more stronger. The pressure is much more even than before.

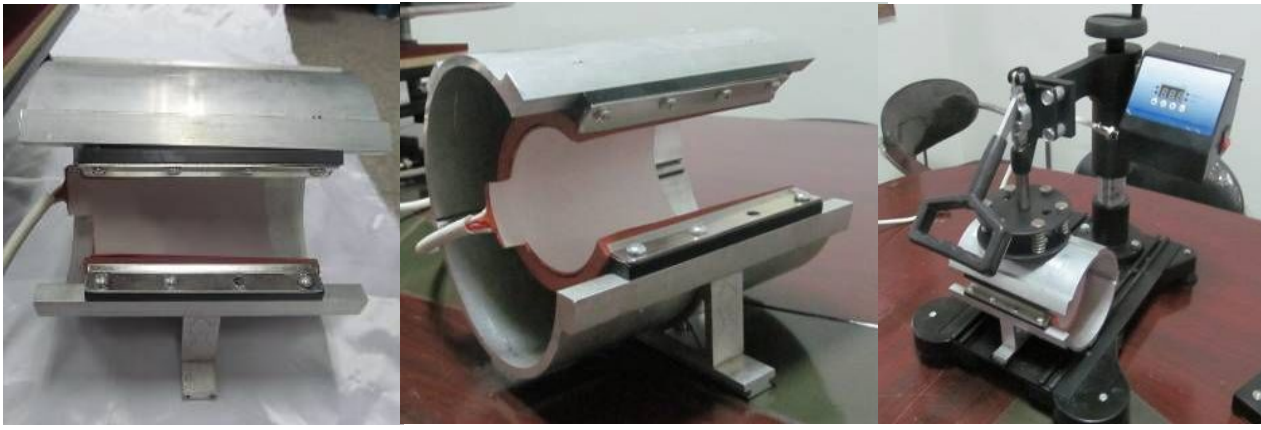

b. The pressure swing-handle can be folded. It get more pleasing, safe and durable.

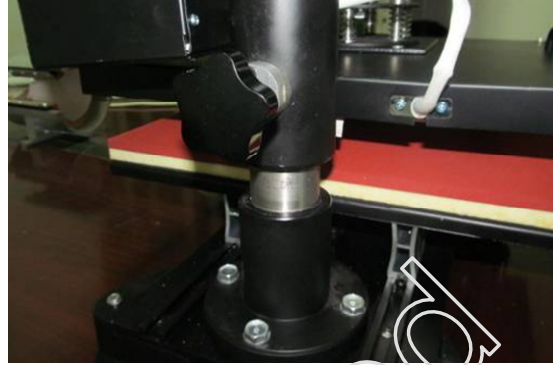

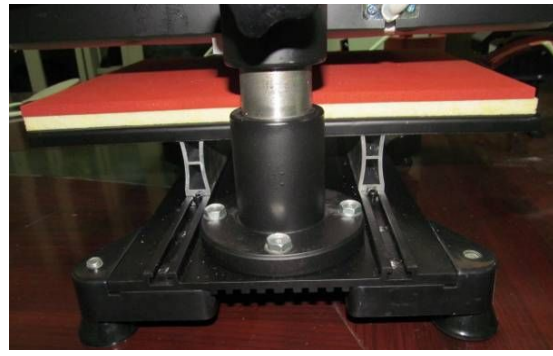

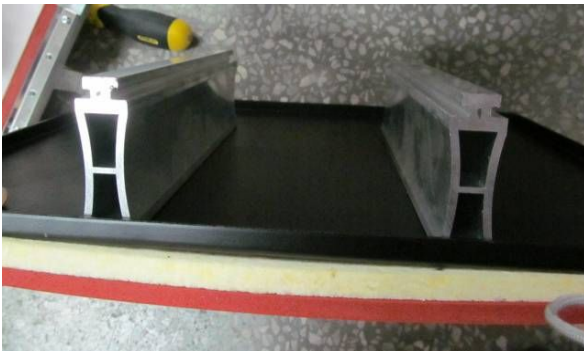

C. The material of the structure change to aluminum alloy instead of cast iron. The old structure of the machine is two parts combine by screw. The new one is one body. It get more firm ,long-life,beautiful and openhanded.

d. The structure of the mug heat press machine change to clam-style. It adopt thick aluminum alloy. Change mould quickly, easy of use, firm and durable.

e. The bottom of the machine change to sliding style installation from fixing by screw. Reach its place easily, automatically, quickly and simply.

To sum up the above, the new combo machine get more firm, beautiful, human-based and operation simply. The efficiency is greatly raised.
